DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Meier (USP 3,792,286). Meier in figure 1 and 2 discloses two inverters connected between the three-phase stator windings of the induction motor.

4. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kawabata et al. (JPO 09-205797). Kawabata discloses a discloses two inverters connected between the three-phase stator windings of the induction motor having a capacitor and a battery interpose therein, see figure 2a-2e.

Allowable Subject Matter

5. Claim 3-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The allowable subject matter is a q-axis current controller configured to provide proportional integral control based on a difference between a q-axis current command and a q-axis current, compensating back EMF, and generating a first q-axis voltage command; a magnetic flux controller configured to provide proportional integral control based on a difference between a magnetic flux command and magnetic flux, and generating a d-axis current command; a d-axis current controller configured to provide proportional integral control based on the difference between the d-axis current command and the d-axis current, and generating a first-d axis voltage command, a first d-q/three-phase coordinate converter adapted to receive the first q-axis voltage command and the first d-axis voltage command, and configured to convert the first q-axis voltage command and the first d-axis voltage command to a first three-phase voltage command;
